These colours are just a representation of the colour and will vary based on computer settings. Real colours will also vary on materials. Unless a RAL colour is chosen, we use a colour-matching service for all other brands with a 5-15% tolerance. Domestic paints are not suitable for spraying. Please utilise real paint samples and colour charts from a local reseller in situ, to ensure you choose the right colour. Lighting can play a big part in colour choice for a specific room. If you want to ensure a solid match to your chosen sample paint pot, you will need to provide the physical sample to us so that we can take this to our supplier for a direct colour-match, as manufacturers' sample pot colours can vary. Please be aware that our standard finish is a low sheen satin finish, giving a wipeable and durable finish. Once the job is completed we cannot be held responsible for any change of mind, so take the time to choose the right colour and refer to our full terms and conditions for further information. We need your confirmed colour choice 14 days prior to our arrival.
